

NB Sorter

Flexible and cost-efficient streamlining of e-commerce sorting

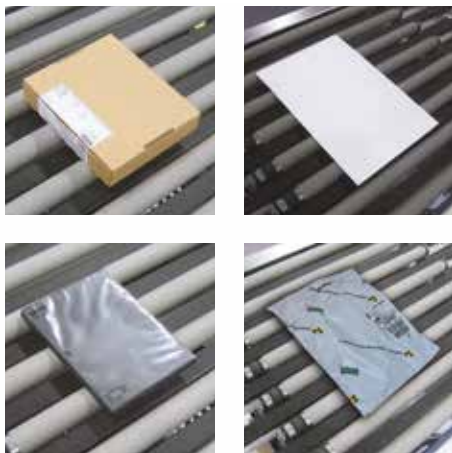

INTER
SYSTEM

THE INTERSYSTEM NB (NARROW BELT) SORTER has been developed in close collaboration with e-commerce businesses, in order to give them a flexible and simple sorter.

The NB Sorter handles both plastic bags and cardboard boxes in a wide range of sizes. The sorter can be used for all types of applications, where there is a need for sorting to a limited number of positions.

The sorter is a complete unit including controls and identification of bags and/or boxes. Its standard design has up to 16 out-feeds, with possibilities for future expansion. With a capacity of up to 3,000 units per hour, it covers a wide range of needs.

In combination with InterSystem modular-based conveyor solutions, we have the capacity to design and install a complete system for effective handling of your complete material flow.

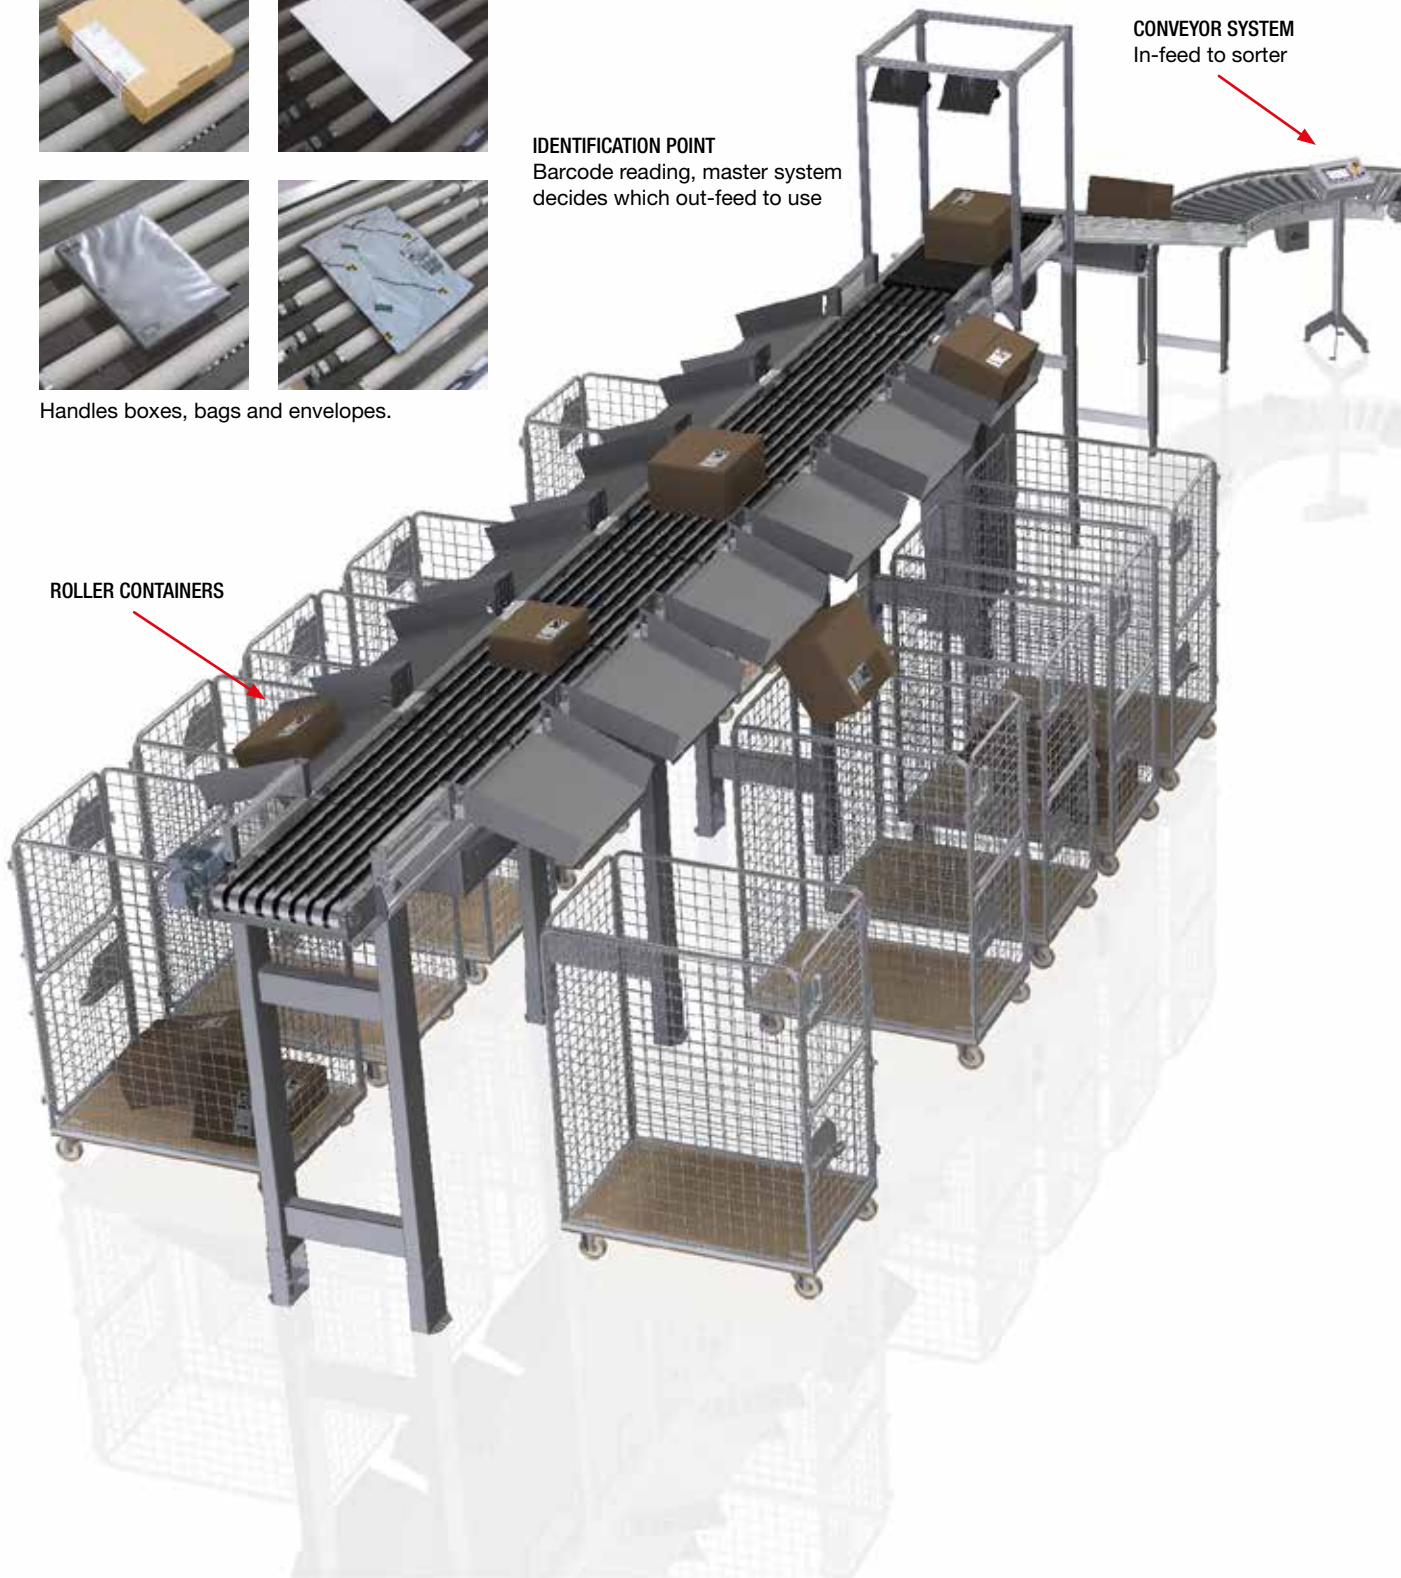

Handles boxes, bags and envelopes.

BENEFITS INTERSYSTEM NB SORTER

- Modular design, easy to extend
- Space efficient
- Proven components from recognized suppliers
- One supplier for the entire system, conveyors, sorter and control system
- Low operating and maintenance cost, easy to service
- Handles boxes, bags and envelopes

OPTIMIZED MATERIALS HANDLING

We have spent the last 25 years in consumer product materials handling. Efficient and trouble free internal materials flow is a factor that can decide if you succeed or fail on the way between you and your customers. We know from experience that any disruption in the flow can affect your profitability, reduce customer satisfaction and damage the client trust that you work so hard to strengthen every day.

This is an insight that has driven us during the first 25 years of work to develop optimized solutions within palletizing, conveyor systems, conveyor modules and sorting. An entire eco-system of products and services that enables customized solutions to perform perfectly while solving your unique challenges.
